

THE ROAD TO 2028 & BEYOND

A series of events culminating with a World Fair of Global Regenerative Solutions during the Olympic Games. July 27th - 30th 2028

Vision

Humanity is at a crossroads. We must all choose self preservation or self-destruction Every decision we make, actions we take and dollar we spend creates the future. How do we create that reality of a world that is healthier for human beings and the environment ? We do it when we transcend differences and unify for a greater cause. The Road to 2028 gives us this opportunity.

Mission

We currently live in a globally Interconnected reality where we have access to generations of ancient wisdom and modern technology with the potential of co-creating a healthier world for all.

Now is the time to implement radical self responsibility and co-create. A time to roll up our sleeves and get involved in midwifing a new narrative. This is a “We the People” moment and a world wide movement. This is a global movement and we must transcend our differences and learn to collaborate not compete. A movement that you are invited to and be a part of creating !!

We are currently developing a core of individuals and organizations committed to embarking on this two-year journey. A journey that will create a series of interconnected events that are mission aligned. These events will consist of performances, workshops, keynote speakers, panels and ongoing initiatives. Events where we will think tank, educate, inspire, actualize solutions and architect a new paradigm. Especially as the old paradigm is struggling and seems to be accelerating in its collapse. A paradigm that no longer serves people or planet.

Earthstock Enterprises has been building out a platform to switchboard this initiative for the last eight years called the ***Alliance for Regenerative Communities***. It is a membership directory of solutionaries, Innovators, consultants, contractors, professionals and products.

These areas include various immersive experiences with music, visual arts, health, sustainability, resilience, arts and culture, Indigenous wisdom, spirituality, and consciousness, green technology, Green economy, peace and justice, impact media, bio regionalism, and more
